DETAILED ACTION

Election/Restrictions

1. Applicant's election of species of Figure 7, claims 30-52 in Paper No. 0806 is acknowledged. Claims 1-29 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species of Figure 7, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 0806.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 44 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sakata's First embodiment (U.S. 7,119,531) in view of Sakata's Fifth embodiment.

Sakata's First embodiment discloses in Fig. 1, a pusher 11 having a pusher block via a balloon used as a pressure head and attached onto the front end of the pusher body 12 (column 3, lines 27-30); a socket 30 contacting electronic device 20 to be tested from an opposite side of socket 30 (see Fig. 1) at the time of conducting a test by pressing input/output terminals of electronic testing apparatus via pin electrodes 22

Art Unit: 2829

(electro 22 are signal pins or source pins are inherent that they are input/output terminals) against socket 30.

Sakata's First embodiment fails to disclose a shaft protruding perpendicularly from an upper surface. However, Sakata's Fifth embodiment disclose in Fig. 6 a pusher block 11D having shaft 12D protruding perpendicularly from an upper surface column 5, lines 10-20).

Therefore, at the time of the subject invention, it would have been obvious for a person of ordinary skill in the art to replace the pusher block of Sakata's First embodiment by the pusher block in the fifth embodiment of Sakata for the purpose of better heat exchange and also protect the pusher block 13D (column 5, lines 10-20).

Allowable Subject Matter

4. Claims 30-43 are allowed.
5. Claims 45-52 are objected to as being dependent upon a rejected base claim 44, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: claims 30 and 45 recite, inter alia, "two or more elastic means provided between lead pusher base and pusher block having an elastic force in the direction of pressing electronic device to be tested." The art of record does not disclose the above limitations, nor would it be obvious to modify the art of record so as to include the above limitations.
